

2202 Pickleball Post

Posts: The posts are made of 3-1/2" galvanized steel pipe.

Net Tightener: The net tightener allows for easy and accurate tensioning of the top cable or rope of the net to set the proper center height of the net. The handle is easily removed after the tension is set.

Finish: Posts are powder coated in green or black.

Warranty: 10 Year limited.

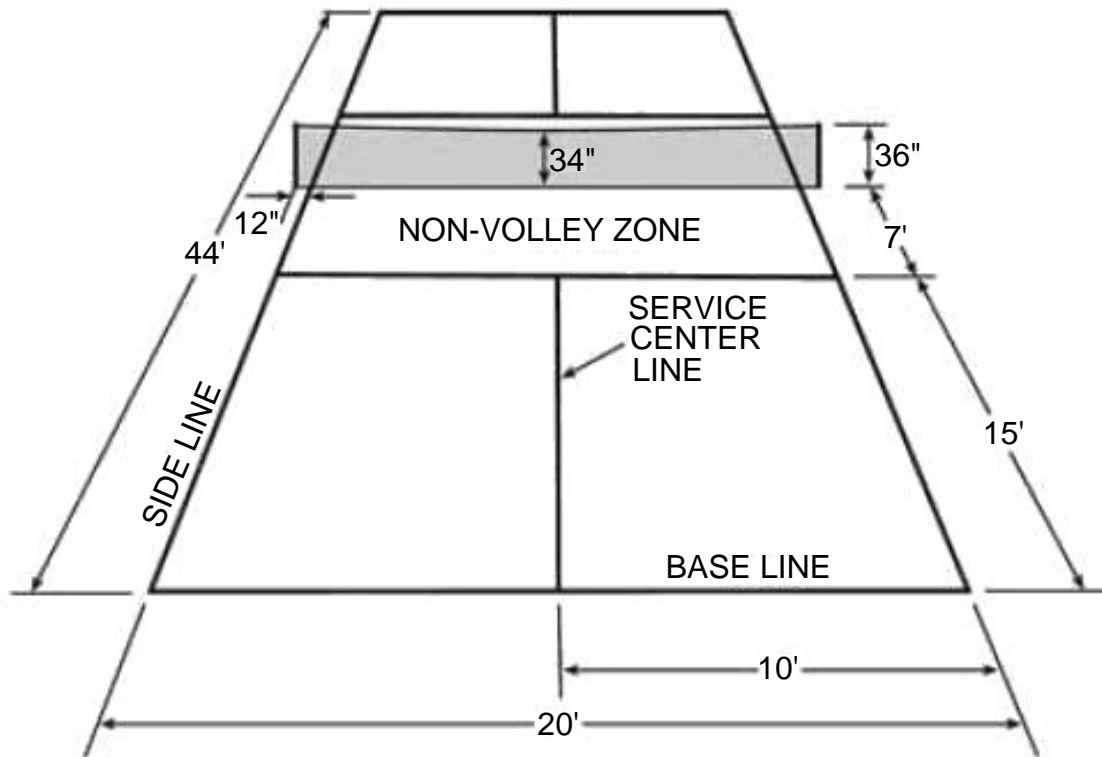

Installation Instructions:

- 1) Dig the footings for the poles according to the diagram above; 22 feet from inside of pipe to inside of pipe.
- 2) Ensure the proper height of the poles. Plumb and square the posts, pour the concrete and let it cure for 3 days before attaching the net and putting it into service.
- 3) Use the Stainless Steel net guide to bolt the top cable end loop to one pole. Run the line over the top pulleys and use the other loop to connect it to the net tightener. Tension the net until the center of the net is 34 inches above the court surface.
- 4) Use the supplied rope to secure the net to the post by wrapping it through the eyelets and around the post.
